

King Super Solvent 32

Sludge, varnish and other harmful deposits and debris in moving machinery are a major cause of wear and shortened machine life. **King Super Solvent 32** effectively removes these from gearboxes, hydraulic systems, compressors, engines and nearly any other oil lubricated system. It is added in the sump at a dosage of 10% to 100% depending upon the application. The most common dosage is 20% added to your oil for one to eight hours before draining it. Your King Oil Company Distributor can assist you in determining the correct dosage for your application.

The product contains no petroleum solvents. Petroleum solvents cannot effectively remove petroleum derived residues because they themselves are made of petroleum. Their action is limited to surface dilution. **King Super Solvent 32** will rapidly and efficiently remove harmful sludge by lifting it from the surfaces of metal by electrostatic action. The solvent is made of three organic (plant derived) components and is carried in a high-quality lubricating base oil. This allows most machines to remain in service while the solvent is in use although this can depend upon the application. We suggest adding 5% **King Super Solvent 32** to the initial fill of oil after machine repairs and then change the oil and filters after a short run in period.

King Super Solvent 32 can be used at ambient temperature, but its action is much more rapid if the temperature of the component being flushed can be kept at 130°F (55°C) or higher while it is circulating. At least some circulation is required. In nearly every case, after a proper flush the machine interior will be cleaner than when it was new, setting the stage for longer machine life.

**OVER 400 SPECIALTY
LUBRICANTS**

TEST	TYPICAL RESULT
Viscosity at 40°C	32.0 cSt
Viscosity at 100°C	6.8 cSt
Viscosity Index	179
Total Acid Number (TAN)	0.13
pH	6.11
Appearance	Amber
Specific Gravity	0.889
Odor	Mildly pungent

For additional information, see our King Super Solvent 32 **Directions for Use** sheet. The product is sold in 12 quart cases, 5 gallon pails, 55 gallon drums and 275 gallon totes.
